

ABSTRACT

A display method can achieve both of substantially high definition image display and high speed dynamic image display.

The image displaying method of an image displaying apparatus

5 having a display portion consisted of a plurality of pixels takes

each of a predetermined number of pixels as one block unit and

forms one screen image for displaying by combining a region for

displaying the same information on a plurality of pixels in the

one block unit during one scanning period and a region for

10 permitting display of respectively different information on the

plurality of pixels in the one block unit.
